### RE: *P.S.C. Case No. 2005-00341*

Dear Ms. O'Donnell:

Enclosed please find and accept for filing the original and eight copies of Kentucky Power's Responses to the Second Set of data requests propounded by KIUC, the Office of Attorney General and the Kentucky Cable Telecommunications Association and the Third Set of data requests propounded by the Commission Staff. Copies are being served on all parties of record in the manner indicated below.

Please contact me if you have any questions.

Sincerely yours,

STITES & HARBISON, PLLC

**BEFORE THE KENTUCKY PUBLIC SERVICE COMMISSION**

**RECEIVED**

DEC 22 2005

PUBLIC SERVICE  
COMMISSION

**IN THE MATTER OF:**

**GENERAL ADJUSTMENT OF ELECTRIC )  
RATES OF KENTUCKY POWER COMPANY )      CASE NO. 2005 -00341**

**KENTUCKY POWER COMPANY  
RESPONSES TO COMMISSION STAFF  
THIRD SET OF DATA REQUEST**

**December 22, 2005**

## **Kentucky Power Company**

### **REQUEST**

Refer to the response to the Commission Staff's Second Data Request dated November 10, 2005 ("Staff's Second Request"), Item 1, pages 11 and 15 of 19. Describe what is meant by the phrase "spark gas activity" and explain the role this activity plays in Kentucky Power's generation of electricity.

### **RESPONSE**

From time to time AEP may buy or sell natural gas selectively as a hedging vehicle for power term commitments where the power prices are correlated to natural gas prices. This is advantageous because gas prices, along with other energy market fundamentals, are one of the components of power prices, and the natural gas transaction hedges the price volatility. These types of transactions are considered spark gas activity.

**WITNESS:** Robert W Bradish

## Kentucky Power Company

### REQUEST

Refer to the response to the Staff's Second Request, Item 2.

a. The explanation for the change in Account No. 4101001 – Provision for Deferred Income Taxes, Utility Operating Income - Federal, shown on page 20 of 33, states that the recording of taxes was changed from a “gross method” to a “net method.” Explain the differences in these recording methods and provide the reason(s) for changing methods.

b. The explanation for the change in Account No. 5010005 – Fuel – Deferred, shown on page 21 of 33, states “Since the cost per ton of coal increased approximately 42% from the previous period to the test period, and the rate being recovered did not increase, a significantly higher amount of fuel expense was deferred to be recovered at a future date.”

- (1) Provide a detailed explanation of the nature and purpose of Account No. 5010005.
- (2) Given that Kentucky Power has a fuel adjustment clause (“FAC”), explain in detail why it is not able to recover its full fuel expense through its FAC.
- (3) Provide copies of the document authorizing the deferral of fuel expense by Kentucky Power.

c. Identify the portion of the test year and prior year balances in Account No. 9220001 – Outside Services Employed – Non-associated, shown on page 29 of 33, related to Kentucky Power’s Sarbanes Oxley audits.

### RESPONSE

2a. Under the gross method, schedule M's were broken out into a deferral component and a reversal component. If the deferral schedule M was a deduction to taxable income, any deferred federal income tax required was recorded to account 4101001. If the deferral schedule M was an addback to taxable income, any deferred federal income tax required was recorded to account 4110001. If the reversal schedule M was an addback to taxable income, any deferred federal income tax required was recorded to account 4111001. If the reversal schedule M was a deduction to taxable income, any deferred federal income tax required was recorded to account 4100001.

Under the net method, the schedule M's are no longer broken out into a deferral component and a reversal component. Instead, they are recorded based on net activity. If the net schedule M is a deduction to taxable income, any deferred federal income tax required is recorded to account 4101001. If the net schedule M is an addback to taxable income, any deferred federal income tax required is recorded to account 4110001.

The total net schedule M's and the total net deferred federal income tax expense is exactly the same in either method.

AEP changed from the gross method to the net method in order to begin using a new tax accounting system that was implemented in January 2004. The new tax accounting system does not allow the capability to record schedule M's and deferred federal income taxes using the gross method.

2b (1) The purpose of Account No. 5010005 is to record the difference between the actual fuel cost incurred with the fuel cost included in base rates during any given month. Any given month, there are two months worth of deferred fuel costs recorded in Account Number 5010005 due to the fact the fuel adjustment clause operates on a two-month lag.

2b (2) The Company does not recover its full fuel cost through its fuel adjustment clause. The Company only recovers the difference between the fuel cost built into base rates and the Company's actual fuel cost incurred to provide service to its customers during any given month.

Due to the fact that the fuel adjustment clause operates on a two-month lag, any given month there should be two months worth of differences between the actual fuel costs incurred and the base level of fuel cost included in base rates. Since the base level of fuel cost built into base rates remained the same during the test year and the actual fuel cost incurred grew during the test year the amount recorded in Account Number 5010005 at June 30, 2005 would be expected to be larger than the amount recorded in Account Number 5010005 in June 30, 2004. The Company believes that for the fuel adjustment clause to work properly, the base rate revenue and base rate expenses must be properly matched. Reduction of test year revenues by the deferred amount permits the design of rates to recover actual fuel costs incurred during the test year. If the adjustment for the deferred revenues is not made, the base rate revenues and expenses will not match and any over-recovery or under-recovery in the test year because of the two-month lag will be perpetuated.

KPSC Case No. 2005-00341  
Commission Staff Third Set Data Request  
Order Dated December 12, 2005  
Item No. 2  
Page 3 of 3

2b (3) The Company has been practicing deferred fuel accounting since January 1, 1974. In the Company testimony in Case No. 6091 its witness stated "Effective January 1, 1974, the Company began following a practice of "deferred accounting" with respect to increases in the cost of fuel covered by the fuel adjustment clause-- that is, that portion of January's fuel cost that would be recovered in March thru the fuel adjustment clause was held in suspense and not charged to Account 501, Fuel Expense, until March. The purpose of such deferred accounting was to more closely match revenues and expenses as they occurred, and to ameliorate to that extent the effect of the lag between the time of the occurrence of increases in the cost of fuel and the time when such increases could be reflected in billings to customers through the operation of the applicable fuel adjustment clause".

Again, in Case No. 8058 the Commission in its order dated June 10, 1981, on page 4, paragraph 6 states "The Company's deferral of fuel costs on its books does not enter into the determination of under- or over-recovery of fuel costs".

Through these proceedings the Company has made the Commission aware of this long-term practice.

2c. The Sarbanes Oxley audit expenses included in Account 9230001 were \$270 for the test year and \$142 for the prior year.

## Kentucky Power Company

### REQUEST

Refer to the response to the Staff's Second Request, Item 3. The match of the revenue and expense items provided in this response reflects only a limited application of the matching principle. As referenced in the request, the matching principle means that all revenues, all expenses, all components of rate base, all plant additions, and all capital items are updated to the same period. With this clarification, explain in detail how Kentucky Power's proposals in this case are consistent with the matching principle.

### RESPONSE

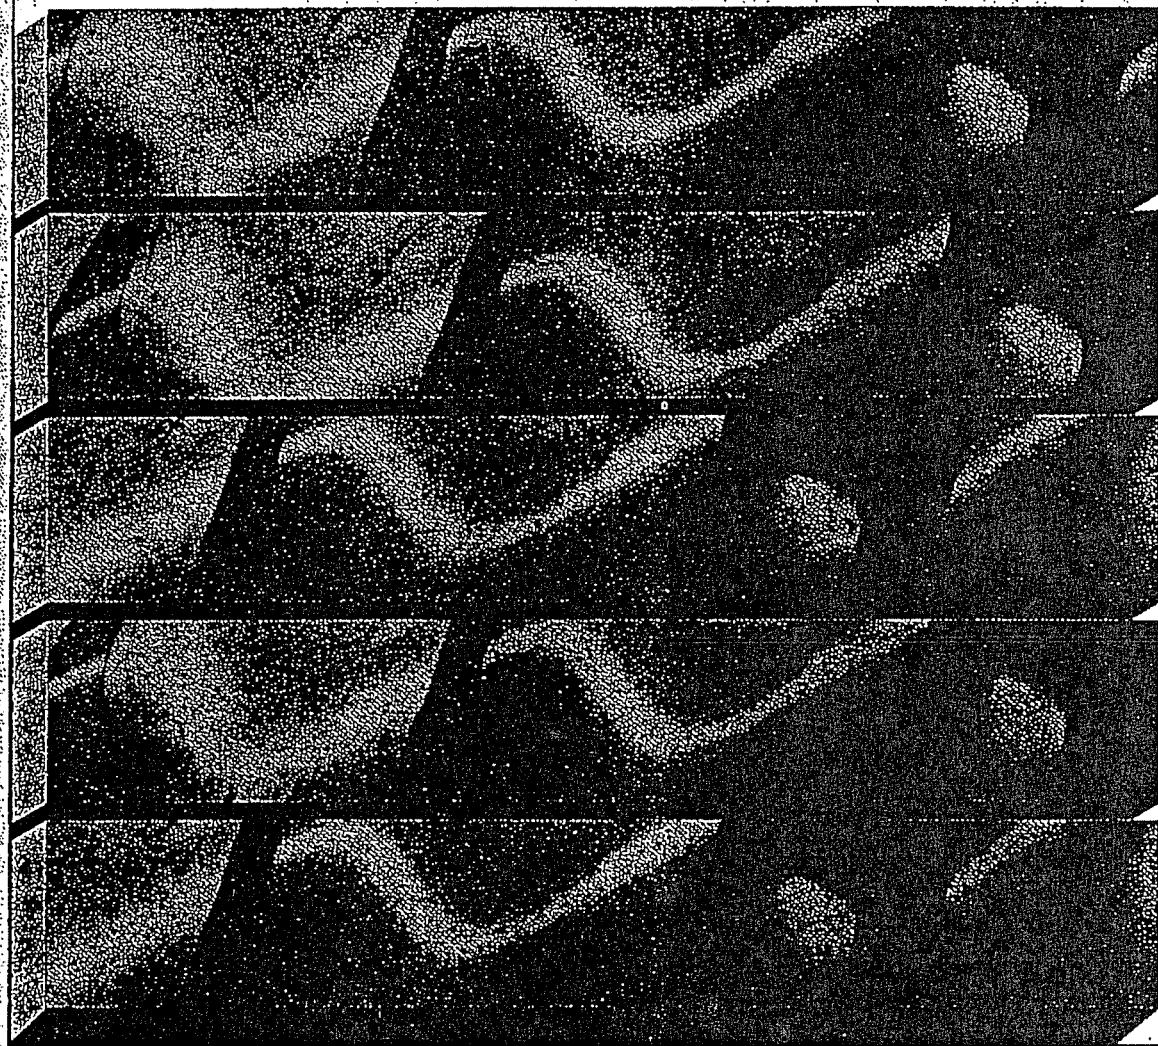

Within the historical test year, all revenues, all expenses, all components of rate base, all plant additions and all capital items were calculated as of the year ending June 30, 2005. Consistent with the Commission's regulation, other than adjustments for known and measurable changes, no other items were updated. *See, 807 KAR 5:001, Section 10(1)(a) ("A twelve month historical test year, which may include adjustments for known and measurable changes.")* This understanding also is consistent with the text *Accounting, The Basis for Business Decision*89 (6th Ed. 1984), by Meigs and Meigs. A copy of the pertinent page is attached. The items adjusted were updated to dates reflecting known and measurable changes.

2 Withdrawals of other assets. The owner of a clothing store, for example, may withdraw merchandise for his or her personal use. The amount of the de to the drawing account would be for the cost of the goods which were withdrawn.

3 Payment of the owner's personal bills out of company funds.

The disposition of the drawing account when financial statements are prepared will be illustrated later in this chapter.

#### Matching revenue and expenses

To prepare an income statement and determine the net income for any particular time period, we use the *matching principle*. The word *matching* refers to the close relationship that exists between certain expenses and the revenue realized as a result of incurring those expenses. For example, assume that a real estate broker earned revenue of \$30,000 in the form of commissions during a given year. Earning these commissions required the making of a great many telephone calls to clients, and the telephone bill for the year amounted to \$1,500. Clearly the telephone expense is closely associated with the revenue realized and must be deducted along with other operating expenses such as advertising and office rent in determining net income for the year.

Note that *timing* is an important factor in matching revenue and expenses. Expenses are incurred in order to produce revenue. This year's expenses are associated with this year's revenue. We do not compare this year's expenses with last year's sales because there is no close relationship between the two. To carry out the matching principle and achieve a valid measurement of each period's net income, our accounting system must ensure that revenue is recognized when it is earned and that expenses are recorded in the period they are incurred.

In summary, revenue must be matched with the related expenses incurred in producing that revenue. In matching revenue and expenses in the income statement, we show first all the revenue earned and then deduct from the revenue all the expenses incurred in producing that revenue.

#### Relating revenue and expenses to time periods

A balance sheet shows the financial position of the business at a given date. An income statement, on the other hand, shows the results of operations over a *period of time*. In fact, the concept of income is meaningless unless it is related to a period of time. For example, if the owner of a business says, "My business produces net income of \$5,000," the meaning is not at all clear; it could be made clear, however, by relating the income to a time period, such as "\$5,000 a week," "\$5,000 a month," or "\$5,000 a year."

**The accounting period** Every business concern prepares a yearly income statement, and most businesses prepare quarterly and monthly income statements

## Kentucky Power Company

### REQUEST

Refer to the response to the Staff's Second Request, Item 10(a). For each of the activities listed below, explain why the expense associated with the activity should be included for rate-making purposes.

- a. Activity No. 35 – Market/Sell Unregulated Products and Services, page 1 of 13.
- b. Activity No. 622 – Market Trans/Ancil Service, page 2 of 13.
- c. Activity No. 625 – Perform Unregulated Energy Trading Activities, page 3 of 13.
- d. Activity No. 626 – Conduct Unregulated Business Development, page 3 of 13.
- e. Activity No. 698 – Perform Regulated Energy Trading Activities, page 3 of 13.
- f. Activity No. 266 – Evaluate Investment/Diversification Opportunities, page 10 of 13.

### RESPONSE

- a. The charges of \$6,992 that are included in Activity No. 35 are related to Kentucky Power's integration into PJM. It is appropriate to include these costs for rate-making purposes because PJM related revenues are also recorded above the line for the benefit of customers.
- b. The charges of \$139,684 that are included in Activity No. 622 for marketing transmission ancillary services are properly charged above the line for rate-making purposes because the revenues from ancillary services are also charged above the line.
- c & d. Upon review, the Company believes that the \$830 charged to Activity No. 625 and the \$292 charged to Activity No. 626 should not have been included for rate-making purposes.
- e. The charges of \$36,698 that are included in Activity No. 698 for regulated energy trading activities represent a portion of the costs incurred by personnel engaged in the buying and selling of energy for Kentucky Power. These costs are properly charged above the line for rate-making purposes because the revenues generated by the regulated energy trading activities are also charged above the line.
- f. The charges of \$2,858 that are included in Activity No. 266 should be included for rate-making purposes. Expenses charged to this activity include siting of potential new power plants, acquisition of new service territories or purchase of new generation. Because the results of these types of activities would benefit customers, the costs for these activities are properly included for rate-making purposes.

**Kentucky Power Company**

**REQUEST**

Refer to the response to the Staff's Second Request, Item 10(b). Provide a schedule of "convenience payments" Kentucky Power made to Appalachian Power Company during the test year. The schedule should show the types of expenses (such as legal matters), the test-year total for the type of expense, and a description of the activities or services included in the type of expense.

**RESPONSE**

Convenience payments made by Appalachian Power Company and billed to Kentucky Power comprised \$21,040 of the \$1,917,524 billed during the test year. See pages 2 and 3 of this response for the detail.

**REQUEST**

Refer to the Staff's Second Request, Item 13. Provide documentation supporting the following items:

- a. The number of bills, notices, and letters mailed in the test year shown on page 11 of 36.
- b. The June 2005 premiums or costs for all employee benefit plan costs shown on page 14 of 36.
- c. The June 2005 monthly lease costs shown on page 20 of 36.
- d. The actual net line of credit fee shown on page 24 of 36.
- e. The vehicle fuel cost for June 2005 shown on page 30 of 36.
- f. The March and June 2005 contributions to pension funding shown on page 35 of 36.

**RESPONSE**

The attached documentation was developed from the Company's operation and maintenance expenses.

- a. Please refer to page 3 of this response for documentation. Also, in our originally filing, we inadvertently picked up a year end 2004 number for the number of bills, notices and letters mailed in Section V, Workpaper S-4, Page 1, Ln 1. We have corrected that page of the filing and it is attached as page 4 of this response.
- b. Please refer to pages 5-6 of this response for documentation.

Medical Plan - Account 9260005  
Life Insurance - Account 9260004  
Dental Plan - Account 9260009  
Retirement Plan - Accounts 9260003 & 9260037  
Long Term Disability - Account 9260007

## **Kentucky Power Company**

### **REQUEST**

Refer to the response to the Staff's Second Request, Item 14. Does Kentucky Power contend that its testimony and exhibits contain all the calculations, workpapers, assumptions, and other supporting documentation that were used to determine the proposed adjustments described in the Application, Section V, Workpaper S-4, pages 1 through 41 of 41? If there are calculations, workpapers, assumptions, or other supporting documentation that were used to determine the proposed adjustments that are not contained in Kentucky Power's testimony and exhibits, provide that information.

### **RESPONSE**

In responding to Staff's Second Request, Item 14, the Company requested all witnesses and certain supporting staff persons to review the pertinent testimony and supply the requested information. Upon receiving this Request the Company again requested all witnesses and appropriate supporting staff persons to examine the pertinent testimony filed in this case, along with exhibits and the Company's Response to Staff's Second Request, Item 14. Upon further review, three additional supporting files were discovered. The Company is providing the additional files on the attached CD.

The Company has acted in good faith and used due diligence in providing responses to all Data Requests, including this Request, and believes that all responsive information has been provided. If the Staff, or any other party, believes that additional information containing the calculations, workpapers, assumptions, and other supporting documentation that were used to determine the proposed adjustments described in the Application, Section V, Workpaper S-4, pages 1 through 41 of 41 exists or should exist the Company requests it be so informed and it will undertake a search for it.

**WITNESS:** Errol K Wagner

## Kentucky Power Company

### REQUEST

Refer to the response to the Staff's Second Request, Item 16.

- a. Concerning the response to Item 16(b), is there a Handy-Whitman index available for electric utilities only or does the index reflect the blending of results for the electric, gas, and water utilities?
- b. If the index reflects the blended results for the three industries, explain why Kentucky Power believes it to be more reasonable than the Consumer Price Index – All Urban Customers (“CPI-U”).
- c. Concerning the response to Item 16(c) and the response to the Staff's Second Request, Item 8, explain why Kentucky Power was not aware the Commission has adjusted storm damage expenses using a 10-year historic average with an inflation factor based on the CPI-U.
- d. Would Kentucky Power agree that it is more reasonable to base the storm damage expense adjustment on 9 years of experience rather than 3 years? Explain the response.
- e. What time period did the Commission use to determine the storm damage expense adjustment approved in Case No. 9061? Case No. 9061, General Adjustment in Electric Rates of Kentucky Power Company, final Order dated December 4, 1984. Explain the response.

### RESPONSE

- a. There are Handy-Whitman cost index numbers for Electric Utility Construction.
- b. The index used does not reflect blended results for the three industries. The Consumer Price Index-All Urban Customers, reflects the changing cost trends in many products including the changing cost trends in tobacco and smoking products, haircuts, funeral expenses, pet and pet products to name a few. The Company believes cost indices that more closely tracks the cost trends of Electric Utility Construction and would yield more reasonable results than the CPI-U.

KPSC Case No. 2005-00341  
Commission Staff Third Set Data Request  
Order Dated December 12, 2005  
Item No. 8  
Page 2 of 2

- c. The Company was not a party to any of the Commission's rate cases in the last 10 years and could not find any regulation addressing the issue or imposing the requirement. The Company believes that the index used most accurately reflects the proper storm damage expense.
- d. No. Because the accounting system has permitted the separation of capital and O&M costs for Storm Samage expense for the past three years only, the Company does not believe that the larger the number of actual years of experience of Storm Damage expense will necessarily result in a more reasonable level of Storm Damage expense. *See, Kentucky Power Company's response to Commission Second Set, No. 16.*
- e. As set out at page 40 of the Commission's December 4, 1984 Order, the Commission used a nine year historical level adjusted to current dollars.

**WITNESS:** Errol K Wagner

## **Kentucky Power Company**

### **REQUEST**

Refer to the response to the Staff's Second Request, Item 19.

- a. Does the Handy-Whitman Total Steam Production Plant Index reflect only information from the electric industry? Explain the response.
- b. Would Kentucky Power agree that it is more reasonable to base the plant maintenance expense adjustment on 9 years of experience rather than 3 years? Explain the response.
- c. Did the Commission accept or reject the use of a "levelized" plant maintenance expense adjustment in Case No. 9061? Explain the response.

### **RESPONSE**

- a. Yes. It is titled "Cost Trends of Electric Utility Construction" (See Attached). There is also a Producer Price Index Industry Data compiled by the U.S. Department of Labor, Bureau of Labor Statistics, specifically for the industry of electric power generation, transmission, and distribution. The actual historical monthly data for electric power generation, transmission, and distribution Producer Price Index begins in December 2003.
- b. No. The installed facilities at the Big Sandy Plant today are very different from the installed facilities at the Big Sandy Plant in June 30, 1996. In the interim, the Company has installed substantial environmental facilities including an SCR and an improved electrostatic precipitator. The frequency maintenance is performed at the Big Sandy Plant is substantially different today than it was in the 1996 era. (A 4-5 year cycle was used in 1996 while a 3-year maintenance cycle now is used.) Therefore using the 1996 level of expense, which does not include any maintenance expense associated with the SCR, which is in-service today, would result in an unreasonable result.
- c. The Commission rejected the use of a regression analysis of "levelized" plant maintenance expense adjustment in Case No. 9061. However, the approach proposed by the Company in this case is different than the approach proposed by the Company in Case No. 9061.

**KPSC Case No. 2005-00341**  
**Commission Staff Third Set Data Request**  
**Order Dated December 12, 2005**  
**Item No. 9**  
**Page 2 of 3**

There are instances when a utility's unique situation requires normalization of a test year expense to achieve fair, just and reasonable rates. This is one such instance. The need to use a normalized three-year plant maintenance expense is driven by (a) the difference in the size of the two units in the Company's inventory (an 800 MW unit and 260 MW unit); and (b) the Company's three-year plant maintenance cycle. Because of the variability resulting from these factors, no single year fairly represents the Company's plant maintenance expense. That is, use of the \$12.4 million expense in the test year is no more appropriate than use of the \$17.2 million in plant maintenance in 2003. Historical evidence of the three-year cycle in the Company's plant maintenance expense may be found in the Company's Response to Item No. 19, Commission's Second Set of Data Request, page 2 of 2.

**KPSC Case No. 2005-00341**  
**Commission Staff Third Set Data Request**  
**Order Dated December 12, 2005**  
**Item No. 10**  
**Page 1 of 1**

**Kentucky Power Company**

**REQUEST**

Refer to the response to the Staff's Second Request, Item 22. The response indicates, "Kentucky Power anticipates that the FERC will act on the Settlement Agreement prior to the conclusion of the evidentiary portion of this case." Consider this an ongoing request. At the time Kentucky Power provides its monthly updated response to the Staff's Second Request, Item 26, also provide a summary of the most recent activity in Federal Energy Regulatory Commission ("FERC") Docket No. ER05-751-000.

**RESPONSE**

AEPSC entered into a settlement agreement with parties to FERC Docket No. ER05-751-000. That agreement was filed with FERC on November 8, 2005. Comments or protests regarding the settlement agreement were filed November 28, 2005. The only comments filed were by the FERC trial staff, which supported the settlement agreement and encouraged its approval. On December 7, 2005, FERC's Chief Administrative Law Judge certified the settlement agreement to the full Commission and recommended its approval. By motion filed November 8, 2005, AEPSC requested that FERC allow the rate contained in the settlement agreement, as opposed to the originally filed rates, to go into effect as of November 1, 2005. AEPSC renewed that request by motion filed with FERC on December 6, 2005. On December 20, 2005 the FERC approved the settlement.

## Kentucky Power Company

### REQUEST

Refer to the response to the Staff's Second Request, Item 24. The response indicates that, if American Electric Power ("AEP") is successful in proceedings regarding the elimination of Through and Out charges and proposed changes to the PJM Interconnection, LLC ("PJM") transmission rate design, the additional revenue that Kentucky Power would receive would be reflected as a credit to the cost of service in a future rate case. Given that Kentucky Power has gone nearly 15 years between rate cases, there is the potential that the outcomes in those proceedings may be known for a significant period of time prior to a future Kentucky Power rate case. Explain how the approach described in the response will "provide ratepayers with adequate future protection."

### RESPONSE

Through and out transactions provided Kentucky Power additional revenues during the years between rate cases. This additional revenue served as an offset to the cost of providing service to retail ratepayers and contributed, in part, to the long period where Kentucky Power did not seek rate relief. During periods between rate cases any additional revenue received from the referenced transmission proceedings would continue to be an offset to the cost of providing service to retail ratepayers and could potentially delay the need for a future rate case. This provides ratepayers adequate future protection. It is the nature of the base rate case process that neither additional revenues nor increased costs are passed through to customers between rate cases. AEP receiving relief in the proceedings regarding the elimination of Through and Out charges and proposed changes to the PJM transmission design is not a known and measurable change.

The past is not necessarily an indicator of the frequency with which the company may need to adjust its rates. Kentucky Power does not believe the Company will wait an additional 15 years before filing its next rate case.

**WITNESS:** Dennis W Bethel

**Kentucky Power Company**

**REQUEST**

Refer to the response to the Attorney General's First Data Request dated November 9, 2005 ("AG's First Request"), Item 64. Identify the remaining work that must be completed before the Wyoming – Jackson Ferry 765 kV transmission line can become operational in June of 2006.

**RESPONSE**

All of the required right of way clearing and all the towers/structures required for the 90 mile 765 kV line have been constructed and erected. The stringing of wire is underway, with 53 miles of the 90 miles of the line completed. The remaining 37 miles of line to be strung are located in Virginia. All of the major construction work at the Wyoming and Jacksons Ferry stations has been completed. There is some minor station bus work as well as protection and control enhancements required to integrate the new station terminal facilities into the existing station facilities. This station related work is awaiting PJM coordinated outages during the Spring of 2006. The line is expected to become operational in June of 2006 barring adverse weather conditions or intervening legal action.

KPSC Case No. 2005-00341  
Commission Staff Third Set Data Request  
Order Dated December 12, 2005  
Item No. 13  
Page 1 of 1

**Kentucky Power Company**

**REQUEST**

Refer to the response to the AG's First Request, Item 71(e). Consider this another ongoing request. Provide, on a monthly basis, a summary of the most recent activity in the FERC docket involving PJM's proposed rate that was filed with FERC on July 1, 2005.

**RESPONSE**

KPCo provides the following update to this data request: PJM supplemented its October 28 filing with an abbreviated cost of service filing on November 30. In that filing, PJM revised its proposed stated rate downward. PJM also requested the matter be set for settlement proceedings. FERC assigned a settlement judge and the first confidential settlement conference was held on December 13. Parties identified issues and additional data requests, and a subsequent settlement conference date of January 12. The Company does not anticipate significant monthly activity but will endeavor to provide an update on a monthly basis.

**WITNESS:** Robert W Bradish

## **Kentucky Power Company**

### **REQUEST**

Refer to the response to the Staff's Second Request, Item 34.

- a. Prepare a schedule comparing the assumptions and estimated demolition costs for the Big Sandy Plant included in Case No. 1991-00066 Case No. 1991-00066, with the assumptions and estimated demolition costs included in the current depreciation study. (Application for Adjustment of Electric Rates of Kentucky Power Company, final Order dated October 28, 1991.)
- b. Explain the reason(s) for any changes in the assumptions between the two depreciation studies.
- c. Explain the reason(s) for any changes in the estimated demolition costs between the two studies that are greater than a positive or negative 10 percent.

### **RESPONSE**

- a. The demolition costs associated with the new depreciation study is \$32,000,000 as shown on page 35 of 443 of Mr. Henderson's workpapers. In nominal dollars this is approximately \$12,000,000 less than the demolition costs associated with the 1990 study (\$43,157,000 in 1990 dollars.) The assumptions used are set out in the attached.
- b. Please see response to Staff's Third Request, Question 14, part a. The 1990 and 2005 studies were performed by two different third-party contractors and the company can not speculate beyond the statements in the studies.
- c. Please see response to Staff's Third Request, Question 14, part a. The 1990 and 2005 studies were performed by two different third-party contractors and the company can not speculate beyond the statements in the studies.

## Assumptions

This estimate is based on all roadways, concrete slabs, and foundations remaining in place.

This estimate is based on AEP providing an on-site clay source for the capping of the ash ponds.

This estimate is based on treating and disposal of all water to either the ground or into the river system.

This estimate is based on dewatering 150 acres at 3 feet deep.

This estimate is based on capping a 150 acre site.

This estimate does not include any survey work to establish grades.

This estimate is based on preserving all storm water sewers to the Big Sandy River.

This estimate is based on saving the two electrical sub-stations located on the AEP property.

This estimate is based on disposing all concrete and brick material at the ash slurry ponds.

This proposal does not include any PCB oil and/or equipment disposal.

This proposal is based on Brandenburg receiving ownership of all ferrous and non-ferrous scrap.

This proposal does not include any site security.

This proposal is based on Pittsburgh ferrous and non-ferrous pricing from the December 29, 2004 American Metal Market publication minus transportation and preparation.
